

Movie Ticket Request

Congratulations on completing your application definition! This document presents a summary overview of your application as defined in the Pega platform. It encapsulates the key elements of your application's design, highlighting its core functionalities and overall structure.

Please note that this is a high-level view and does not include granular details like data models or sample data. It's an ideal resource for a quick reference, facilitating discussions among team members and stakeholders, and for guiding strategic decisions in your application development process.

Blueprint ID: BP-2418019

Application Context

CineWave Entertainment manages movie ticket bookings across multiple theatres and locations. Ticket booking and tracking processes are currently handled manually through emails and offline systems, leading to delays, lack of visibility, and inefficiencies in managing bookings and customer communication. CineWave Entertainment wants to build a Movie Ticket Booking Management application on Pega Platform™ to: Allow customers to request movie ticket bookings. Enable staff to manage show details and seating availability Capture customer confirmations before final booking Process booking requests and track status Notify customers upon booking confirmation Project Objectives : Students are expected to: Design a case lifecycle for ticket booking Define and implement user interactions Model required data structures Configure basic business logic and automation Ensure smooth flow from booking request to ticket confirmation

Organization name	Industry	Language
Internet Service Provider	Other	English

Users access the application through defined channels, assume specific roles, and trigger workflows that manage how work progresses. Those workflows operate on shared Data Objects to ensure the system stays consistent and up to date.
